- On October 15, 2004, the Oregon Board of Pharmacy adopted a rule requiring pseudoephedrine (PSE) products, other than certain liquids and gel caps, be kept behind the counter (BTC) and requiring picture ID for each sale. The rule went into effect on November 15, 2004.
- On April 6, 2005, the Board adopted a rule requiring PSE products be kept behind the *pharmacy* counter and requiring picture ID *and logging* for each sale. The rule went into effect on May 14, 2005.
- On April 5, 2006, the Board adopted a rule requiring a *prescription* for *all* PSE products. The rule went into effect on July 1, 2006.

• For the 7 months the first rule was in place (Nov 2004 to May 2005), there were a total of 166 meth lab incidents; an average of 24 per month. For the 7 equivalent months in the year prior to the first rule (Nov 2003 to May 2004), there were a total of 284 meth lab incidents; an average of 41 per month. **This reflects a 41% reduction.**

• For the 13 months the second rule was in place (June 2005 to June 2006), there were a total of 117 meth lab incidents; an average of 9 per month. For the 13 equivalent months prior to a BTC pseudoephedrine rule (June to Oct 2004 and Nov 2003 to June 2004), there were a total of 502 meth lab incidents; an average of 39 per month. **This reflects a 77% reduction.**

• For the 79 months the third rule has been in place (July 2006 to January 2013), there were a total of 100 meth lab incidents; an average of 1.3 per month. For the 79 equivalent months prior to a BTC pseudoephedrine rule (July to Oct 2004, plus Jan to Oct 2004 x 6, plus Nov to Dec 2003 x 7, plus Jan 2004), there were a total of 3,094 meth lab incidents; an average of 39 per month. **This reflects a 97% reduction.** In addition, the majority of the meth lab incidents from 2007 to January 2012 were boxed, dismantled, dump sites, or chemical seizures only (69 of the 85). Oregon had only 3 operational / non-cooking meth lab incidents in 2007, 3 in 2008, 3 in 2009, 3 in 2010, 3 in 2011, and 1 2012. All incidents where the source of the PSE has been determined have been traced to retail PSE smurfed in neighboring states, specifically Washington, Idaho, Nevada, and California.
